Offer

clean air technology

"Aerpura is a innovative start up in indoor and outdoor air purification. From health clinics (hospitals, laboratories, medical and dental rooms) to chemical industry, from agriculture production (fruit, meal, flowers) to storage and transport, we have a specific product for every need. Advanced products, certified by the most prestigious research institutes, to eliminate viruses, bacteria, chemical pollutants and odorant molecules. This is possible thanks to the

innovative air cleaning technology, which clears in few minutes, among others, the H1N1 virus and the coronavirus (Virpath - Institut Pasteur study).

Inside the unit, viruses, bacteria, pollutants and odorous molecules are crushed and turned into pure air. For Chemical industry choosing the new air purification technology is far-sighted because it completely eliminates odors, microorganisms and chemical pollutants: the output air is perfectly healthy and does not contain residues and contaminants, hazardous for the workers' safety."

Keywords: processing food storage fruit storage food air purification

Cooperation Offered

1. Other
2. Sales / Distribution
3. Technical co-operation

Offer

eco building system

An eco-innovative way to build sustainable homes, offices, kindergartens, schools, etc ... steel and lime hemp materials to 0 km.

The building has excellent thermal performance and indoor environment quality, speed and ease of construction, low cost.

Also interesting to activate projects of business creation for activities related to hemp: agriculture, to food, to textiles.

We can provide building consultancy and even collaboration to enterprise creation in the areas of construction and food processing hemp.

Keywords: building eco-building job creation circular economy tourist villages

Cooperation Offered

1. Manufacturing agreement
2. Technical co-operation
